## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 2/10/2009 have been fully considered but they are not persuasive.

Applicant argues that Lamkin does not teach that second event information that, when read by the ENAV engine, causes the ENAV engine to prohibit informing the AV playback engine, which decodes the AV data, of the occurrence of the key input event.

In response, the examiner respectfully disagrees. Since the navigation buttons, up, left, right, and down, do not work for DVD navigation unless video is playing in full-screen, Lamkin teaches the limitation "a second event information to prohibit informing the AV playback engine, which decodes the AV data, of the occurrence of the key input event". The examiner deems that "when video is not playing in full-screen" is a second event information. When the second event information occurs, the navigation buttons do not work. Therefore, it prohibits informing the AV playback engine of the occurrence of the key input event since the input buttons do not work at all.

### ***Conclusion***
